

AFTER-SCHOOL

CODING CLUB

Year 3 & 4

Wednesday 3.30 pm - 4.30 pm

15 April - 8 July 2026

In this exciting club, students, both new and returning, use the MakeCode platform to design and build their own arcade-style video games while developing essential coding skills such as variables, coordinates, controls, and game logic.

Through fun, hands-on projects, students learn how to animate characters, design levels, and program interactions as they progress from simple starter games to creating their own jumper and platformer games by the end of the term. Sessions take place in a safe and supportive environment that encourages creativity, problem-solving and confidence with technology.
