AFTER-SCHOOL CODING CLUB

Year 1 & 2

Our Kilo Coding Club introduces children to the exciting world of coding through fun, hands-on projects using Scratch. Designed for both beginners and children with some prior experience, the club helps students build a strong foundation in key programming concepts.

Students explore coding concepts including:

- Algorithms
- Sequencing
- Loops
- Events

Using our spiral learning approach, children revisit and build upon coding concepts over time, developing deeper understanding and confidence at their own pace.

Through interactive games, animations, stories, and challenges, students are encouraged to problem-solve, think creatively, experiment with ideas, and become independent digital creators.

Each session balances learning and fun, helping children develop logical thinking, resilience, teamwork, and creativity while building confidence in their early computing skills.
